ActiVHeat has an idea to help keep your fingers comfortably warm whenever you wear a pair of gloves - the Battery Heated Glove Liners. This \$70 item features a cable management system that is hidden in clothing, complete with glove liners that are connected via plug that comes out of the sleeve to the [battery pack](#). It is powered by a single battery pack that holds half a dozen AA batteries which provide enough juice for 4 hours of non-stop heating. Something tells me getting rechargeable batteries would be a good (and green) idea. You will be able to adjust the heat to three levels according to just how low the mercury around you has dropped. The ActiVHeat Battery Heated Glove Liners will retail for \$70 a pop.
